We live in a world that rewards yet another better and shinier version over a resilient and more durable one. You won't catch me picking up a Nokia 586 over the Android phones coming out around today, but that doesn't mean I don't appreciate some of the devices around today. The same goes for cars. The manufacturer wins with the money - even if I prefer the first one I owned over this or that one. Whenever I update a PSD, I start to feel my mind floating a bit above the artwork diff. Between my current sat-nav app and cell service provider, I've never been timelier than picking a new retail location. For that reason, there is a new option to feel more responsive while I preview. You'll be able to see the existing lighting and color balance underneath the design. You can also switch to the Lightroom perspective to "open" and directly view the underlying layers. Yes, you really can do that. Photoshop has layers. Nearly every feature has been improved or added. No longer can a client say, "I just dropped this off this morning!" You can resolve that with a few clicks. Unappreciative clients need not concern you. The new color engine makes any changes a lot easier. You can even use the grid tool to fine-tune edges and text. All of these improvements affect most but not all elements. For example, you can't add more items to the Design Grid—that one is a feature you just have to accept. On the HTML5 canvas, layer styles can be applied to the shape tool when it is activated. Layer styles,

like the previous release, retain the original fill and stroke patterns, but include a shape mask that can be applied to remove those styles outside the shape. You can also adjust the shape fill and stroke settings to the new layer style.

Adobe is also announcing new features for Adobe Illustrator 24 later this year that will make creative work even more streamlined across Creative Cloud users from different disciplines. Depending on the type of project, users can use their favorite design software in a collaborative way for web, print, video and other media. Currently, there is an option to share Adobe Illustrator models with other desktop applications, but it is never as powerful as the shared model with Photoshop. With Adobe Sensei though, users can give their models a voice in real time with the ability to listen to audio commentary and see where in the design process decisions are coming from as they make their model move naturally from one direction to another. For instance, a model may have a decision about a font choice in the early stages of setting text. Graphic assets from Photoshop's groups or layers—such as patterns, gradients, palettes or brushes—can be shared just as easily with other designers, giving them new ideas about what they may want to use or what kind of feel they want for their art direction. More features for Adobe Architecture, Adobe Captivate 7.5 and Adobe XD 13 are also in the works. Coming in 2016, Adobe Sensei-powered Illustrator and Design will open up shared models to the world of real-time collaboration, allowing Designers to share and edit alongside Architects or more than one Editor that has access to the same model, file or page. While Adobe XD is already available in the cloud for desktop as well as mobile, the collaboration features in Illustrator and Design for ARCHITECT and Design customers will make their product more powerful and secure. "Until now, a client model was the ideal in the Creative Suite, and one that was typically supplied with people's creative work," said Scott Saunders a product manager for Adobe XD. "But that's not the only way to share work, either within a

team or between clients. Today, with the release of the next generation of Creative Suite, we're enabling the sharing of the highest quality creative work anywhere, across all devices and the web. "
